

Counterfeit Prevention Policy

Clarke & Severn Electronics recognizes that, in recent years, there has been a rise in counterfeit components circulating in the market and that this presents a risk for customers in terms of quality and product reliability.

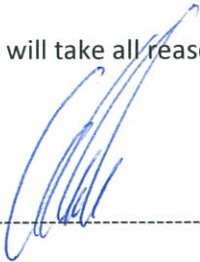

Our company's Counterfeit Prevention Policy is based on having a secure supply chain.

As the Authorized Distributors for the OEM's (Original Equipment Manufacturer's) this ensures that our customers only receive authentic components from these manufacturers, backed by our ISO9001:2015 procedures.

We conduct a supplier accreditation survey annually for all suppliers to maintain a high level of confidence and trust in the suppliers from whom we source products. This survey is also part of our supplier management system which provides our customers with confidence in the products that we supply.

Where a customer directs us to purchase products from a specific supplier for their projects, we expect that the customer has a level of confidence in that supplier, which we in turn can trust.

We will take all reasonable steps to ensure the integrity of our supply chain with ongoing monitoring.

Glenn Clarke

Managing Director
